Customer Journey Map

The Customer Journey Map illustrates the step-by-step interaction of the retail business owner with the Strategic Product Placement Analysis system. It represents how users identify problems, interact with the dashboard, and make data-driven decisions.

Customer Persona

User Type: Retail Business Owner / Store Manager
Goal: Improve sales performance and optimize product placement strategies

---

Customer Journey Stages

Stage 1: Awareness (Problem Recognition)

The business owner observes fluctuating sales and ineffective promotional results. There is uncertainty regarding optimal product positioning and pricing strategies.

User Action: Identifies need for analytical solution
Pain Point: Lack of clear insights from raw data

Stage 2: Consideration (Exploring Solution)

The user accesses the web-based analytics platform developed using Flask and Tableau integration.

User Action: Opens dashboard via web application
Experience: Clean UI with navigation options (Home, About, Dashboard, Story, Contact)

Stage 3: Interaction (Data Exploration)

The user interacts with filters such as:

- Product Category
- Season
- Promotion Status
- Product Position
- Competitor Pricing

User Action: Applies filters and explores visualizations
System Response: Dashboard updates dynamically in real time

Stage 4: Insight Generation

The dashboard provides key insights such as:

- High-performing product categories
- Impact of product placement on sales
- Effectiveness of promotional campaigns
- Seasonal demand variations

User Benefit: Clear visual understanding of business performance

---

Stage 5: Decision Making

Based on insights, the business owner:

- Adjusts product placement strategies
- Modifies pricing models
- Improves promotional campaigns
- Allocates inventory efficiently

Outcome: Data-driven strategic planning

Stage 6: Continuous Monitoring

The user regularly revisits the dashboard to track KPIs and measure improvements.

Result: Continuous business optimization and performance tracking

---

Customer Journey Summary Table

Stage	User Action	Pain Points	System Support	Outcome
Awareness	Identify sales issues	No data clarity	Dashboard solution	Need recognized
Consideration	Access web app	Complex data	Simple UI	Easy navigation
Interaction	Apply filters	Raw data confusion	Interactive visuals	Clear insights
Decision	Modify strategy	Risk of wrong decision	Data-backed analysis	Improved sales
Monitoring	Track KPIs	Manual tracking	Automated dashboard	Continuous growth
